## LAYS BLAME TO COAT COLLARS

Ladd Claims Fur Collars Are Dyed With Coal Tar Dye and Are Dangerous.

Apropos of the skin diseases which have bea sop evalent upon the faces and necks of -everal of our crizens this winter, Barber Peter-on in a communication to Prof. Ladd of the Agricultur-

al college of Fargo, asks what is the cause of it, and in reply to his inquiry, Prof. Ladd gave as his reason that the trouble is, no doubt, due to the dye used in the coat collars.

Ed Johnson was the first one

afflicted with the disease.

was of the opinion that the irritation upon his skin by the collar was the cause, but had no that the collar contained artific al coloring. It was the same ca e with J. C. Thingelstad and J. D. Reid, and in each instance the di-ea-e was caused by coats that were purchased last fall. Prof. Ladd's letter is printed

below: Feb. 1, 1912. P. E. Peterson, Binford, N. D.

Dear Sir: I beg to acknowlege your favor of Jany. 31st, and note what you say with regard to several per-so s having bad faces, and the fact that they are wearing new coats with fur collars.

There is no question but what the trouble is due to the dye . used in the collars. Many of the furs on the market are dyed in e e imitation of some other fur, and d usually coal tar dye is used for this purpose. Phere have been e e

many cases of serious poisoning from the absorption of coal tar f dye into the skin of the face and e neck. Some of these have be n very difficult to treat and and certainly cannot be successd fully treated as long as the objectionable collar is worn.

**)-**Yours very truly, d E. F. LADD. t
