

PRAIRIE FIRE RAGING

At the time of closing the forms a prairie fire is raging and is causing a wide area of damage to grain in shocks and hay in stacks. A spark from the freight engine this forenoon is given as the cause. With a terrific wind blowing it was impossible to check it, although some heroic work was done in saving some property in its path. Tollef Tweed lost a couple of hay stacks, Knute Oien lost some, and others, it is believed, will be the losers.
