

Mine of Purest Mica

Carrington, May 12. — Gust Stack, of the Beck Clothing company store, has a mica mine on his lot in northeast Carrington. While digging a well yesterday the workmen dug into large deposits of the valuable mineral, the mica being found between two or three feet of the ground at a depth of eighteen to twenty feet.

The mica appears to be of the first quality. It is clear and splits accurately. Specimens have been sent to the University at Grand Forks for analysis and a report will be received within a few days.

Good sized pieces are found and from all appearances it will prove of merchantable value.
