

Sentinel-Courier: Mrs. J. West-
erhouser, residing 3½ miles north of
Sutton, took three-grain bichloride
tablets Sunday morning, mistaking
them for other medicine, and as a re-
sult is in a serious condition. Dr.
Lewis of Sutton was called to attend
the case, and he in turn called Dr.
Brimi of this city in consultation.
All that could be done was done for
the sufferer, but as bichloride is a
very slow acting poison, it will be a
week or ten days before it can be
definitely stated whether or not the
victim will recover. This should be
a warning to others not to take
headache tablets and the like before
making sure they are taking some
deadly poison.
