Estherville, Ia., Feb. lat.—Mr. George
J. Barber, et this place area.

"Bodd's Kidney Pills are the best medicine in the world. There is nothing as good. I had been sick for over 15 pears with Kidney Disease, which finally turned into Bright's Disease. I was treated by Dectors in Chicago, but they didn't do me any good.—The best Doctor in Estherville treated me for five years with no better success. I heard of Dodd's Kidney Pills, and made up my mind to give them a trial.

"I am very thankful to be able to say that they cured me completely, and I think they are the best medicine in the world."

world."

The honest, carnest, straightforward experiences of real living men and women are the only material used in advertising Dodd's Kidney Pills. One such testimony is worth more than a thousand unsupported claims. The people who have used Dodd's Kidney Pills are those whose evidence is worth consideration, and surely nothing can be more convincing than a statement like Mr. Barber's. There are thousands of others just as strong.

Proof Positive.

Husband (reading)—I'm surprised to learn that a married man writes the fashion notes for the woman's page in this

paper. Wife-But, dear, how do you know that such is the case?

"Listen to this item: 'There will be no change in pocketbooks this season' Now, only a married man could have penned that."—Cincinnati Enquirer.

Salser's Earliest Cane.

Another new thing. Can be cut six times during a season and sprouts again with lightning rapidity. Next to Salzer's Teosinte it will make more green fodder than anything else, cheap as dirt and grows

anything else, cheap as dirt and grows everywhere.

Of Salzer's Renovator Grass Mixture, just the thing for pastures and meadows, Mr. E. Rappold, East Park, Ga., writes, "I sowed Salzer's Grass Mixture on soil so poor two men could not raise a fuss on it," and in forty-one days after sowing I had the grandest stand of grass in the County. Salzer's Grass Mixtures sprout quickly and produce enormously." 100,000 barrels choice Seed Potatoes. SALZER'S NEW NATIONAL OATS.

Here is a winner, a prodigy, a marvel, enormously prohific, strong, healthy vigorous, producing in thirty States from 150 to 300 bu. per acre. You had best sow a lot of it, Mr. Farmer, in 1904, and in the fall sell it to your neighbors at \$1 a bu.

JUST SEND 10c IN STAMPS to the John A. Salzer Seed Co., La Crosse, Wis., and receive in return their big catalog and lots of farm seed samples free.

BUILDING A LIMEKILN.

The Kind Here Described Can Be Constructed Cheaply and Furnishes Its Own Draft.

Limekilns are built from 20 to 30 feet high on the side of a hill, as high as convenient to get up to, similar to a cave or root cellar, the top coming up level on the back to drive there and then fill it from that point, the front of the kiln to be built perpendicular the full height of limestone or any other stone about 18 or 24 inches thick. On the back or bank side 12 or 15 inches is sufficient thickness. The inside is lined with fire brick or red rock, or of such material as will not burn; the opening should be 8 to 10 feet in diameter and in funnel shape, the throat of it not too

FRONT OF LIMEKILN.

small so as to choke. The opening at the bottom on the face side is made the shape of an inverted V, running to the back of the opening. They build two of these side by side, only having a partition between them; then draw one while the other is burning, and that keeps the men employed all the time.

One single arch costs about \$175, or a this way when it is done for a general business, but if it is only for a farmer for his own use he can do it much if nitrate of soda, cottonseed meal, etc., cheaper and without builidng the kiln by laying upon the ground a floor of logs and timber, enough to make a good bed; then lay on the wood and stone the same as in the kiln and build it up as a hay stack but flatter at the top, as you get in more stone in that way, or it can be built long and not round as wished. This is the way for home use; 5,000 to 10,000 bushels can be burnt in a heap of this kind. People use coal (buckwheat) here for the purpose, but I suppose the same can be accomplished in using wood and will be cheaper if wood is handy. The cut shows the mode of building. The kiln built as I describe will furnish its own draft and regulate itself. It takes about two or three days and nights to burn it and needs little attention if burned in a heap. It is saving of the months. I think a cold was responsicovering the entire heap with clay or soil of some kind except the extreme top. -Rural New Yorker.

HOW TO HANDLE SKUNKS.

Try Method Here Described and See How Easy It Is to Avoid Unpleasant Results.

ten-foot pole or board, heavy enough so plan in the case of a wornout soil is to they cannot drag it away. Then, instead | plant the peas in rows, using acid phosof putting them in a nail keg (in which | phate at the rate of 300 pounds to the case you would have about 99 failures acre. The peas should be cultivated at out of every 100 skunks, or shooting least twice. The seed can be picked or them, in which case, if you try it, you the crop can be pastured off to good would think there were at least 200 failures out of every 100 trapped), approach ent benefit from this method of soil imthe rear end of the pole or board cautiously, and fasten a rope to it five or six the crop as hay unless the equivalent in feet in length. Then start off slowly, stable manure be returned to the land. dragging skunk and all after you. You The pea roots, stubble and fallen leaves can drag them any distance you see fit, contain only about one-third of the and there will be no odor. Then you total plant food gathered by the crop, can dispatch them in any manner you and could be expected to give only temyou take hold of the pole and dip them in water deep enough to submerge Good and Bad Comports. them), there will be odor. The object of this method is to get the oder, if any, a safe distance from the house of bee yard. Try this, and see how easy and sure it is.

Starting Steers on Grain.

In starting steers on feed there are several methods in vogue. Some feeders give a heavy grain ration right from the start, using a pound of meal for every 100 pounds of live weight daily. Other men start the steers on a third of a pound to every 100, increasing gradually until two-thirds of a pound is reached. The latter plan usually gives the cheapest grains, and a half cent gained on every pound means a considerable profit for a big bunch of steers. Midland Farmer.

Bad whisky is not necessary for good health, nor clean clothes, nor good farming, nor money in bank .-Farm Journal.

DESTRUCTION OF WEEDS.

Prove That the Use of Chemicals Produces Good Results.

Much interest has been shown at a number of the agricultural experiment stations in the possibility of weed destruction by means of chemicals. As long ago as 1895 it was found at the Vermont station that the orange hawkweed, a serious pest in pastures and meadows, could be destroyed without injury to the grass by sowing salt over the land at the rate of 3,000 pounds per acre. Many experiments have since been conducted at the same station with other chemicals for the eradication of weeds in walks, drives, courts, etc. Among the chemicals tested were salt, copper sulphate, kerosene, liver-of-sulphur, carbolic acid, arsenic and salsoda. arsenate of soda, and two commercial weed killers, the active principle of which apparently was arsenic. The weeds which it was sought to destroy were plaintains, dandelion, chicory, ragweed, knotweed and various grasses. All the chemicals were applied in solution except the salt. As in the case of the hawkweed experiments, salt was found efficient in destroying all the weeds when applied dry and in large quantity. When salt is used for this purpose adjacent lawns should be protected against washing, or they may be injured. Crude carbolic acid, one pint in four pints of water, applied at the rate of eight gallons per square rod, was very efficient. The various arsenical preparations proved valuable as weed destroyers, and choice between them was largely a matter of expense. All things considered, the arsenate of soda and the carbolic acid solutions proved the most valuable chemicals for weed destruction under the conditions of these experiments.-Farmers' Review.

TESTS WITH COWPEAS.

Valuable Information Supplied by Tennessee Agricultural Experiment Station Bulletin,

A number of fertilizer experiments have been made from year to year on double one \$300. There is wood laid in cowpeas. This crop has been found the throat sufficient to start the fire; to respond readily to the mineral ferthen put in a layer of coal and then of tilizers, in particular to acid phosphate. limestone, continuing until it gets to the Numerous experiments have been made top of the opening. This is worked in to test the value of nitrogen along with phosphoric acid, but thus far no increased growth has apparently resulted who owns his own stone and wants lime from nitrogen, even on the poorest land.

COWPEA PLANTS. (76.5 per cent, of the total nitrogen and 72. per cent, of the total dry matter

Good and Bad Composts. Composts are necessary in the finer processes of gardening, but they should be made in a cleanly manner, and be kept free from contamination. There is nothing better than compounds of clean sods free from weed seeds and manure from grain or forage-fed animals, mixed in varying proportions, and well worked together as decomposition progresses It takes about two years to make a firstclass article, but much may be accomplished in one season by frequent turnings. If you start such a compost do not degrade it with doubtful organic wastes. keep them separate, burn where possible or bury deeply. The ounce of prevention in this matter is worth whole tons of the disease "cures" our scientists have so far provided.—Rural New Yorker.

WOMEN ARE ESPECIALLY COLDS

Colds Invariably Result in Catarrh, Which Sets Up a Host of Distressing Diseases.

PE-RU-NA Both Protects and Cures a Cold-Read Proof.

Miss Rose Gordon, 2,103 Oakland av., Oakland Heights, Madison, Wis.,

"A few years ago I caught a severe cold, which resulted in chronic bron-chitis and catarrh. Our family physi-cian prescribed medicines which gave temporary relief only. I began taking Peruna and improved at once.
Two bottles cured me. I recommend
Peruna to all sufferers, and am most
grateful to you for your valuable
medicine."—Miss Rose Gordon.

Washington, D.C., 609 H sfreet, N. W.

Dear Dr. Hartman:—"I used to think that the doctors knew all about our suches and palms and were the proper ones to consult when sick, but since I have been sick myself I certainly had good reason to change my mind. Daring the winter I caught a heavy cold, which developed into catarrh of the bronchial tubes and an inflamed condition of the respiratory organs. The doctors were affaid that pneumonia would set in and prescribed pills, powders and packs until I sickened of the whole thing, as I did not improve. One of the ladies in the homehad a bottle of Peruna and she advised me to try that. Shortly after I been reached, it will take much longer and places to think that a teaspoon ful of Peruna before each meal during backing during the winter season will absolutely protect a person from catching cold. Now, if this is true (and there is no doubt of it), thousands of lives would be saved, and tens of thousands of cases of chronic catarrh prevented, by this simple precaution within reach of every one.

After a cold has been contracted a blessing to suffering humanity."—Mary E. Sampson.

If you do not derive prompt and satisfactory results from the use of Peruna before each meal during the winter season will absolutely protect a person from catching cold. Now, if this is true (and there is no doubt of it), thousands of cases of chronic catarrh prevented, by this imple precaution within reach of elimpton within reach of the indicate the wi Washington, D.
