THOMPSON BRUTHERS.

Millions of dollars Lost by Farmers.

The loss to the farmers of the United States from smut and other fungous diseases of wheat, barley, oats and other grains amounts to millions of dollars every year.

The spores or seed of the fungus are on the seed grain which you plant; when the grain sprouts and grows, the fungus grows too; it follows up through the stalk, into the blade and into the ear, and the result is blighted plant, light grains and a small

We want to remind you that you have been contributing your share to this tremendous loss, and that you can stop it by treating your seed grain and potatoes with some good germicide which will kill the fungus seed. Probably the most effective of these agents is Formaldehyde, but the economy in its use depends upon its strength and purity. We carry in stock Formaldehyde and we guarantee its strength and purity. You can't afford to take any chances in this matter; when your seed is in the ground it is too late to correct the mistake.

Can You Afford to Use It?

The price of a bushel of wheat expended for Formaldehyde will add several bushels to the next harvest. It takes as much land and labor to raise a light crop as a heavy one. Think it over
